

# Pulse Power vs. Pulse Duration Time

## Test Condition:

1. 100 cycle pulses as referenced below shall be applied at room temperature.
2. Applied power and pulse duration time must be below the line in the graph.
3. The resistance value change shall be less than  $\pm 1\%$ .

P: Applied pulse power [watt]  
t: Pulse duration time [m second]  
T: Pulse cycle time is 5 seconds
